

**IT'S UP TO
THESE 5!**

**AND IT'S
UP TO US!**

Our 5 Georgia Public Service Commissioners will decide whether Georgia has a clean or dirty energy future. They can grant or deny Georgia Power's request to increase its use of fossil fuels to generate our electricity.

Take 5 minutes to ask them to require Georgia Power to listen to the global scientific community and rapidly transition away from fossil fuels to clean and renewable energy.

We are in a climate emergency, but Georgia Power is seeking permission from the Commissioners to delay the promised retirement of coal plants *and* to invest over \$1 billion in infrastructure that would tie us to natural gas for decades. Please take a moment **now** to submit a public comment to the Commissioners, urging them to require Georgia Power to invest in clean energy alternatives that will save us money and protect our climate for current and future generations.

Your comment need only be a few sentences long. Scan the QR code for instructions and sample language. Please pass this card on so others can comment, too!
